a mirror subassembly disposed in said housing and including at least one transparent element and a reflector layer associated with said at least one transparent element, a portion of said reflector layer defining an opening; and

a passenger supplemental inflatable restraint display for displaying the enablement status of passenger supplemental inflatable restraint, said display comprising:

an indicia panel disposed in said housing behind said mirror subassembly so as to cover the opening in said reflector layer, said indicia panel including an opaque region and a plurality of substantially non-opaque regions defining a plurality of indicia symbols, said plurality of indicia symbols including a first indicia symbol, a second indicia symbol, and a third indicia symbol, wherein at least one of said substantially non-opaque regions define said first indicia symbol and has an amber color, and wherein said indicia symbols include alphanumeric letters; and

a plurality of light sources positioned in said housing to transmit amber colored light through said substantially non-opaque regions of said indicia panel and through said mirror subassembly to selectively display the illuminated indicia symbols, wherein said plurality of light sources includes at least a first light source associated with said first indicia symbol, a second light source associated with said second indicia symbol, and a third light source associated with said third indicia symbol, said first, second, and third light sources are

independently activated from one another so as to independently illuminate said first, second, and third indicia symbols; and

a baffle subassembly disposed between said light sources and said indicia panel such that light from said first light source does not illuminate said second and third indicia symbols, light from said second light source does not illuminate said first and third indicia symbols, and light from said third light source does not illuminate said first and second indicia symbols.
